KeyOptions announces its release of 'HealthKeyID' mobile app. - a unique digital health wallet to safely record, store and present 'Virolens™' test results.

SYDNEY AUSTRALIA – July 15, 2021:

KeyOptions, an Australian technology company, today launched its free app. 'HealthKeyID', that provides users with their very own secure digital test record for Virolens rapid analyzer devices. 'HealthKeyID' is available immediately for download for Apple and Android devices.

HealthKeyID records an individual's Virolens Covid-19 test result and has the ability to also store 3rd party results. Stored on a phone as a digital wallet, the data is typically presented as a QR code and will show if a person has tested negative for a virus.

THE CHALLENGE

In the past, it has been normal practice to show paper certificates as proof of their vaccination status. This has been happening for decades, since overseas travel has been available to the masses.

However, the global pandemic with Covid-19 has thrown these systems into disarray, with differing types of paper test result being presented to validate a traveller's vaccination status. This has caused considerable delays and costs associated with processing.

Clearly, there is need for a digital alternative designed to improve verifiability and circumvent some of the current delays caused by the huge volume of paper counterparts for Covid-19. Governments, businesses and airline operators have sought hard to solve this problem, and is coming to the conclusion that a digital passport is the future.

THE SOLUTION

The premise of HealthKeyID is simple. A traveler downloads the app. on their smartphone and has a Covid- 19 test. Once registered, the app. provides a safe storage of the test result, presenting that result as a digital certificate and QR code.

It can do this in two ways, either by 'handshaking' with 'Virolens', the world's fastest Covid-19 testing technology, or by uploading a 3rd party Covid19 test result. The primary focus is for a negative Covid-19 test. Once the results are accepted, the user will receive, via HealthKeyID, a QR code, verifying they are safe to fly or enter a location requiring proof of health status.

Gavin Milton- White, Chief Commercial Officer for KeyOptions explained. "I believe that eventually most countries will recognize digital platforms, such as this app. driven solution, as an acceptable digital health wallet or passport. HealthKeyID has a unique ability to work alongside our Virolens testing equipment, and so it makes absolute sense that we combine Virolens Covid-19 testing with an app. specifically developed to handle the result from that test. We are delighted that after much development, we are able to bring such an app.to market as a free download".

SECURE DATA PROTECTION

HealthKeyID has a unique secure approach to data privacy. All data is fully encrypted with only the data owner having the key to access his or her information. Personal data is secured within the user's own country servers under its' prevailing data protocols. The app. is fully compliant with GDPR* data and privacy law regulations.

KeyOptions' goal with HealthKeyID is to have internationally recognized digital health passport app. offering the most convenient and secure way to safeguard personal viral test results, whilst potentially offering preparedness to assist and combat the present and any future Covid-19 pandemic.

Not only is HealthKeyID secure, and has the benefit of partnering with Virolens technology, it has the ability to open up the commercial world, working within large public venues, sports stadia, rail transport, even retail and restaurant environments. The initial focus for the app. is within the air travel sector.

“In an airport environment, it is now feasible to imagine that in just a few minutes, a traveller can download and register for HealthKeyID, take a Virolens Covid-19 test and have that result recorded on their app. ready for inspection and travel.” said Milton- White.

For further information or to try out HealthKeyID, go to www.KeyOptions.com and download the app. for iOS or Android.
